

## THERAPEUTIC SHOES

The superior therapy concept for early functional therapy

---

Early functional treatment, especially in case of injuries to the foot or lower leg, has become established in the past few years. It successfully contributes to an improvement in the treatment results and the shortening of the rehabilitation period.

Alternative early functional treatment with our therapeutic shoes makes limited, safe, and stabilized movement and loadbearing possible.

### ADVANTAGES

**Advantages of early functional treatment with ORTHOTECH therapeutic shoes:**

#### FASTER RECOVERY

- \* Earlier loadbearing is possible
- \* Reduced vocational downtime

#### MORE COMFORT

- \* No crutches or bulky bandages
- \* Accessible for personal hygiene
- \* Heel-to-toe flexing assistance due to heel roll
- \* 2 widths due to supplied insoles

**Superior therapy compared to:**

#### CAST

- \* Reduced thrombosis treatment
- \* Wound care possible
- \* No repeated treatment necessary

#### ORTHOSES AND BANDAGES

- \* Improved rotational stability

#### HARD PLASTIC BANDAGES

- \* Maintains gait symmetry and body statics
- \* More mobility

## ORTHOTECH STABIL

---

### INDICATION

- \* Treatment and follow-up treatment of capsular ligament lesions of the ankle joint that must be treated surgically or conservatively
- \* Certain bone injuries of the ankle joint and foot such as stress fractures
- \* Ankle joint distortions, ankle joint arthritis
- \* Resistance to wobbling
- \* Immobilization of the tarsal and metatarsal regions

Our proven ORTHOTECH Stabil is now also available as a **SANDAL** with the same features and well-known advantages.

Stabil hook-and-loop fasteners or lacing / Black

Stabil Sandal / Black

## ORTHOTECH VARIO-STABIL

---

### INDICATION

- \* Early functional therapy of Achilles tendon ruptures after surgical and conservative treatment
- \* Stability aid for loadbearing insufficiencies and motion-induced pain in the lower leg and posterior foot regions by means of a flexible arthrodesis boot
- \* Follow-up treatment of fractures and arthrodeses in the tarsal and distal lower leg regions
- \* Compensation for muscular insufficiencies (paralysis) in the lower leg and foot regions

Vario Stabil / White

Vario Stabil / Black

## ORTHOTECH REHA-STABIL

---

### INDICATION

- \* Condition after a stroke
- \* Flaccid paralysis
- \* Spastic paralysis

Reha-Stabil Black-White/ Black

## ORTHOTECH STABIL-SAFETY

The work safety Stabil shoe / S3 (in accordance with EN ISO 20345:2007)

---

### INDICATION

- \* Treatment and follow-up treatment of ankle joint injuries
- \* For preventative treatment of patients who suffer from frequent ankle joint injuries
- \* Ankle joint arthritis
- \* Resistance to wobbling

Orthopedic fitting and individual insoles in accordance with BGR 191 are possible
