

ORTHOTECH THERAPY SHOES

Early functional treatment measures have become established in the last few years, in particular in cases of injuries to the foot and lower leg. They successfully help improve treatment results and shorten rehabilitation times.

Alternative early-functional treatment with our therapy shoes permits limited, securely guided, and stabilised movement and weight-bearing.

We have continually expanded and perfected the concept of therapy shoes. Development and production of therapy shoes has turned us into pioneers and enablers in the area of the early functional treatment method.

ADVANTAGES

Advantages of early functional treatment with ORTHOTECH therapy shoes:

FASTER HEALING

- * Earlier weight-bearing possible
- * Shorter inability to work

HIGHER COMFORT

- * No crutches or voluminous bandages
- * Accessible for body hygiene
- * Rolling support by heel roll
- * Heel pad
- * Available in widths H and L

Superior treatment as compared to:

CAST

- * Reduced thrombosis treatment
- * Wound treatment possible
- * No multiple treatment necessary

ORTHOSES AND BANDAGES

- * Better rotation stability

HARD PLASTIC BANDAGES

- * Preservation of symmetrical gait and body statics
- * Greater mobility
